

ABSTRACT

A beverage mixer and dispenser is disclosed. The housing of the beverage mixer and dispenser includes a mixing chamber and an extract container positioned above the mixing chamber. A metering device is positioned between the extract container and the mixing
5 chamber to allow dispensing of a desired amount of extract from the extract container into the mixing chamber. The beverage mixer and dispenser includes a feed opening, which is exposed at an exterior surface of the housing and leads into the mixing chamber to allow for manual addition of drink additives to the mixing chamber. The beverage mixer and dispenser also includes a cream chamber. The cream chamber is adapted to receive a liquid-extract
10 combination from the mixing chamber. A rotatable mixing rotor is positioned within the mixing chamber and a rotatable first cream rotor is located within the cream chamber to provide thorough mixing of the liquid-extract-cream combination.
